

Answers to Questions from P2.1

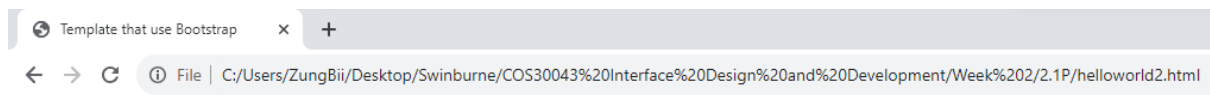

Name: Tran Quoc Dung

Student ID: 103803891

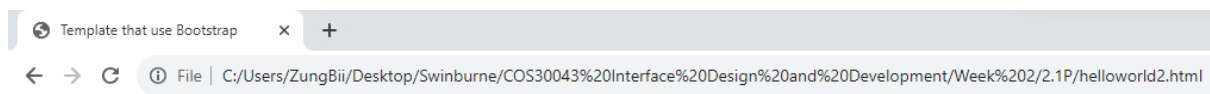

1. Is the font type in helloworld2.html similar to helloworld.html (you created in the first week)?

No, *helloworld2.html* does not have the similar font type, compared to *helloworld.html*, since the file this week use different font-family properties in Bootstrap framework.

2. What happens if you remove `<div class="container"></div>`?

Before removing `<div class = "container"></div>`

Hello World!

After removing `<div class = "container"></div>`

As we can see from the images, by removing the foregoing component, the location of the text "Hello World!" changes from the middle of the page to the left side of the page.

3. What is the purpose of `<div class="container"></div>`?

By seeing the differences after removing `<div class = "container"></div>`, we can understand that **every property** with *class = "container"* will be edited by Bootstrap framework, by changing its position to the middle of the page.

Therefore, the purpose of `<div class = "container"></div>` is to allocate the position of the text "Hello World!", or maybe any other properties included in this `<div>`.
